View of the packaging

The multiplexer is mainly designed to work with CCTV cameras. It can split video signal from one camera or

another source to 4 monitors, without any loss of quality of video signal. It can work continuously indoors and be connected to both black & white as well as color cameras. The device can work with different TV systems. It can be easily mounted on a wall. LED diode informs about power being switched on. DC power converter is not included in the package and should be purchased separately. We advice to use as the power supply [150-808](#).

Specifications

Name	RV-1/4
Code	150-808
